

HOW TO MEASURE SUNRAIL™ SYSTEMS

We encourage our customers to order from local authorized dealers to ensure personal service, local representation and project assistance.

STEP 1- Select a SunRail™ model

Based on the available SunRail™ selections, choose a model.

STEP 2- Sketch your project

Sketch your project to scale. Start from the left and measure from each end to the next end or corner. Please note what type of surface the railing system will be mounted on (Figure 1a or 2a).

Mounting on wood deck:

It is very important to secure the rail mounting bases into the joist supports below for overall strength and stability. Most decks have double joists at the perimeter and to optimize railing strength, the base screws should be located in each of those (Figure 1b and 1c). Any decking overlap from the joist must be taken into consideration when measuring.

Mounting on concrete or masonry:

If the railing system is mounted on concrete or masonry, Atlantis Rail engineers will design bases to be a minimum of 2" away from the edges to avoid cracking (Figure 2b and 2c).

Atlantis Rail Systems has developed an easy way to ensure the proper and accurate measurement of stairs. Refer to Figure 3 and document the appropriate measurements needed on your sketch.

STEP 3- Determine the required rail height of each section

Railing sections are offered in standard heights of 36" and 42". Custom heights are available upon request. Refer to your local building codes and note the required rail height for each section on your project sketch.

STEP 4- Determining supplies for your project

We encourage you to contact your local authorized dealer. To find a dealer in your area, refer to the "Find a Dealer" page on the Atlantis Rail website or call 1-800-541-6829 for assistance. If a dealer is not located in your area, please fax or email the plan to Atlantis Rail Systems; (508) 732-9798 or info@atlantisrail.com.
