### **Atlantis Rail Introduces the New RailEasy™ Spectrum Cable Railing System**

#### **A Square Post Cable Railing System that Offers Many Colorful Options While Providing an Unobstructed View**

Plymouth, MA – December 10, 2012 – Atlantis Rail Systems has developed their first square post cable railing system. The RailEasy™ Spectrum features prefabricated, fascia mounted, 316 stainless steel square posts, horizontal cable infill utilizing HandiSwage or RailEasy™ fittings and top rail mounting components. These Top Mounting Plate Assemblies allow customers to source their desired flat top rail.

When customers began to express their desire for a square cable railing system, Atlantis Rail decided to take a step away from round posts and start the research, design, development and testing of a square system. “The RailEasy™ Spectrum is what we envisioned when we began this process of manufacturing a square stock cable railing system,” says Richard Hicks, Product Manager for Atlantis Rail Systems. “The goal of the RailEasy™ Spectrum was to develop an aesthetic that is different from the existing Atlantis Rail product offerings. With the square design, color options and universal nature of the posts, I think we have succeeded in achieving our goal.”

The RailEasy™ Spectrum features pre-drilled stainless square posts and fittings for fascia mounting capabilities. Customers must source their desired flat handrail. For easy ordering, the RailEasy™ Spectrum is offered in three post kit options. The post kits available are 36” straight posts, 36” stair posts, and 42” straight posts. Each post kit is offered in a standard color of black or clear coated stainless. Special order and custom post colors are available upon request. All post kits include a 316 stainless steel 1-1/2” square post and a Top Mounting Plate Assembly (with

fasteners), plastic bottom cap and lag screws for fascia mounting. This assembly allows for the easy installation of a customer supplied flat top rail. Each plate is precision machined with matching hole patterns for easy installation to posts and handrails. The stainless plate is fastened to the post and wood screws are then drilled up into the top rail. For corner applications, a Corner Mending Plate Set is required. This set is used to join Top Mounting Plate Assemblies on corner posts. The hole patterns match those of the Mounting Plate and attach using 1/4" screws and nuts. The mounting plate features angled ends which allow installers to meet 90° or 135° angles at corners. Corners require double posts.

These post kits space the cable railing infill at less than 3" on-center. The cable infill options include a choice between using HandiSwage fittings with 1/8" cable or RailEasy™ Studs with 5/32" cable. The HandiSwage cable infill features stainless steel hand swage fittings and cable. They are offered in a 1/8" cable size and include standard studs, small studs and a variety of nut sets. The RailEasy™ cable infill option features mechanical swage capabilities using simple hand tools. These components are offered in a 5/32" cable size and include the RailEasy™ Stud and a variety of nut sets to provide a finished look. Both sizes of cable have a 1x19 strand construction to achieve lasting strength and durability. All fittings, cable and accessories are made from grade 316L stainless steel for maximum corrosion resistance. The tools for installing HandiSwage or RailEasy™ cable railing systems are available through Atlantis Rail.

Throughout their existence, Atlantis Rail Systems has been offering stainless steel railings for do-it-yourself enthusiasts and construction professionals alike. "The RailEasy™ Spectrum was inspired by our customers' requests for a square post cable railing system," says David Morgan, Vice President of Sales and Marketing for Atlantis Rail Systems. "We always listen to the needs of our customers. They are the people who sell, install or live with our product. Our sole purpose is to keep these people happy by developing our product line to facilitate an easier installation, more design options to please a variety of preferences and simple stocking requirements for our dealers." This system was developed for indoor and outdoor, residential and commercial use. Atlantis Rail recommends checking with local building codes before installing the RailEasy™ Spectrum.

Atlantis Rail Systems has a network of dealers throughout the United States that offer the RailEasy™ Spectrum System and other quality RailEasy™ cable railing components. Please contact an Atlantis Sales Representative to find a dealer near you or visit the Dealer Locator on the Atlantis Rail website. To learn more about Atlantis Rail's line of railing systems and railing components, please visit [www.atlantisrail.com](http://www.atlantisrail.com) or call (800) 541-6829.

Atlantis Rail is a leading manufacturer of premium stainless steel railing systems with infill options of cable railing, balusters and glass panels. These prefabricated, modular systems make for quick and easy installations and offer unobstructed views. They are designed for assembly using a collection of patented railing fittings and components to allow for the delivery of turn key stainless steel railing systems at

a low cost. These systems are ideal for commercial and residential, indoor and outdoor applications.
